SR400 Vault Paper Towel Dispenser   Installation Instructions

1. Ensure you have all items needed to perform the installation, including:
a) Pencil & ruler.
b) Button head fasteners with a 5/16" shaft diameter. Use 7 fasteners for single bundle dispensers. Use 9 fasteners for double bundle dispensers. Fastening system (including anchors if used) must be appropriate to the wall construction/material.
c) Drill & appropriately sized bits.
d) Driver & bit appropriate for the fastener head.
e) Bubble level.
f) Caulking gun & pick proof security caulking.

2. Determine where you want the dispenser located and with a pencil, lightly mark the wall where the top center of the dispenser would be located.

3. Make a new mark 1-1/8" below the initial mark. The new mark is where the center hanger bolt will be located.

4. Drill and install a fastener at the location of the new mark until there is a 1/8" gap between the wall surface and the fastener head.

5. Hang the dispenser on the fastener from the top center hanger hole.

7. Use the bubble level to ensure that the top of the dispenser is level, then mark the location of the other mounting holes with a pencil.

8. Remove the dispenser, then drill holes for the other fasteners as marked.

9. Hang the dispenser on the center hanger bolt, then install the other fasteners. The two bottom fastening locations can be more easily accessed by removing and reinstalling the tether cable retaining nuts. Ensure all fasteners are tightened snug-ly, and that the dispenser opens, closes, and locks properly.

10.   Apply a bead of security caulking to accepted standards of security and aesthetics. Ensure that fine line such as monofilament line could not be jammed between the wall and the back of the dispenser.
