

SR400 Vault Paper Towel Dispenser

Operation Instructions

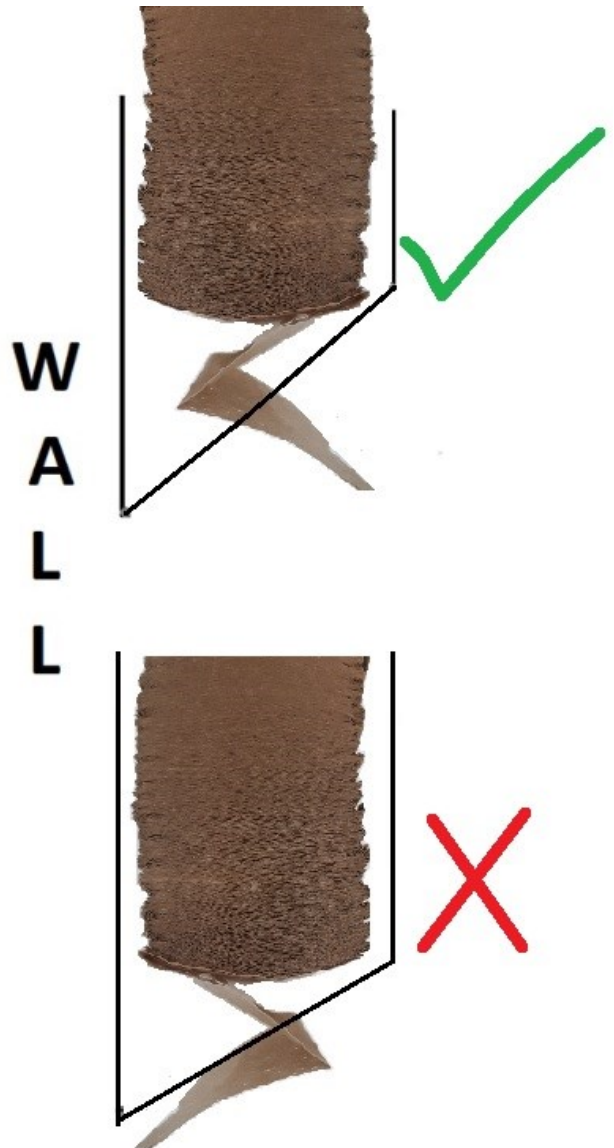

The SR400 Vault Paper Towel Dispenser is optimized for use with multifold (also known as z-fold) paper towels. The single bundle version can accept one 250 sheet bundle at a time, whereas the taller double bundle version can accept up to two 250 bundles.

Step 1. Unlock and open the front cover of the dispenser as widely as the tether cables permit.

Step 2. Feed the lead edge of the bottom sheet through the slot at the bottom of the front cover. The lead edge should be oriented to point away from the wall (see illustration below).

Step 3. When adding a bundle of paper towels on top of other paper towels, interlink the bottom sheet of the top bundle with the top sheet of the bottom bundle to ensure continuous feeding.

Step 4. Close and lock the front cover and check that the paper towel dispenser is feeding paper towels properly.
